1)

The screenshot shows the Programiz Online Java Compiler interface. The code editor contains a Java program named `StudentCalculator.java`. The program prompts the user to enter total marks and the number of subjects, calculates the average marks, and prints the result. The output window shows the successful execution of the program with the following input and output:

```
Enter total marks: 450
Enter number of subjects: 5
Average Marks = 90
=== Code Execution Successful ===
```

2)

The screenshot shows the Programiz Online Java Compiler interface. The code editor contains a Java program named `Employee.java`. The program prompts the user to enter an employee name and attempts to print the name. However, the program throws a `NullPointerException` because the `Employee` object has not been created. The output window shows the error message:

```
ERROR!
Error: Employee object is not created.
=== Code Execution Successful ===
```
